IonFuture Introduces AtmosAir's Clean Air Solutions to Romanian Airports at Annual Conference

Romanian airport managers to learn about new technology to make air in terminals and indoor spaces cleaner and healthier in wake of Covid-19 pandemic

Bucharest. Bucharest-based eco-solutions company IonFuture will be participating in the 30th edition of the Romanian Airport Association's annual conference today with its technology partner AtmosAir. Representatives from all of Romania's 17 airports will be invited to learn about technological breakthroughs to clean indoor air made available this month in Romania from US manufacturer AtmosAir.

"The theme of this year's conference is Romanian air transport in the context of the pandemic," noted IonFuture's Frank Pietrucha. "Providing clean air in high volume places like airports has been a critical issue during this crisis. AtmosAir has delivered technology to major US airports, like Los Angeles International Airport (LAX), Philadelphia and Fort Lauderdale, that have proven to break down the cellular structure of known viruses, such as Human Coronavirus 229E."

Pietrucha's presentation today will include LAX as a case study in its presentation to airport managers. Pietrucha will explain how AtmosAir neutralizes both odors and viruses on contact; a proactive approach.

The AtmosAir system integrates into existing commercial systems and seeks out contaminants in an indoor space. Air ions go to the contaminants minimizing them at their source. AtmosAir removes particle matter, molds, spores, allergens and TVOCs (Total Volatile Organic Compounds) from the air which leads to healthier living it also breaks down the cellular structure of known viruses.

"The Covid-19 pandemic has ushered in a new era of heightened awareness about personal health and well-being that isn't likely to disappear even as we return to normalcy," observes IonFuture Pietrucha. "There is a lot of attention placed on large buildings and complexes like airports to make sure they provide a safe, clean environment for everyone. AtmosAir is a great solution to improve public health while making the air we breathe cleaner and fresher."

About IonFuture

IonFuture is an eco-solutions company that provides technology to clean air and water through a process called ionization. Headquartered in Bucharest, Romania, IonFuture represents Iorex and AtmosAir equipment -- providing the highest quality, scientifically proven products available to remove small particles from water and air. Our cost-effective solutions open the door to a future of good health, sustainability and cost-savings. www.ionfuture.net
